Sprint Report 3 – CMPS 115

Product: Sead System
Team: SEADS
March 9, 2015

Actions to Stop Doing:
- Miscommunicating on who is doing the documentation; will have multiple people all working on the same thing
- Showing up late to class due to Scrum meetings starting late

What should we start doing:
- Again, keeping the physical scrum board and burn up chart more up to date. Our group does not use the room where the scrum board is located often which is the cause of this problem. Please note that the virtual scrum board is always up to date.
- Also again, more time meetings with the whole team working together, rather than a subset getting together to work. This has been a challenge the whole project due to the complete variance of schedules in our group. We actually had a difficult time just setting a time to meet for scrum meetings, which are 15 minutes.
- Just to mix things up, team bonding outside of coding for this project would really help to solidify all of the team relations to extend past the end of this quarter.

What should we keep doing:

- Our group has been fantastic in overcoming the problem of not being able to work together as a whole group most of the time. Everyone in the group has been responsible about completing their task for the end result of the sprint along with staying on top of the mountain of documentation we have to perform

Work Completed / Not Completed
Completed
- Getting sample data with PA1000
- Fixing zoom issue when changing units of the graphs
- Fix time stamps for the plug emulator
- Make the site live
- Add granularity to the graph
- Add time periods to the graph
- Make date picker error check input
- Clean up front end code and CSS
Not Completed
- Live updating graph
- Appliance data visualization page

Story Points Completed:

Total Story Points Completed	43
Total days in Sprint 3	15
Total ideal work hours	50
User story points per day	2.87
Ideal work hours per day	3.33
